

# Metaphorical Components of a Website

<HTML>

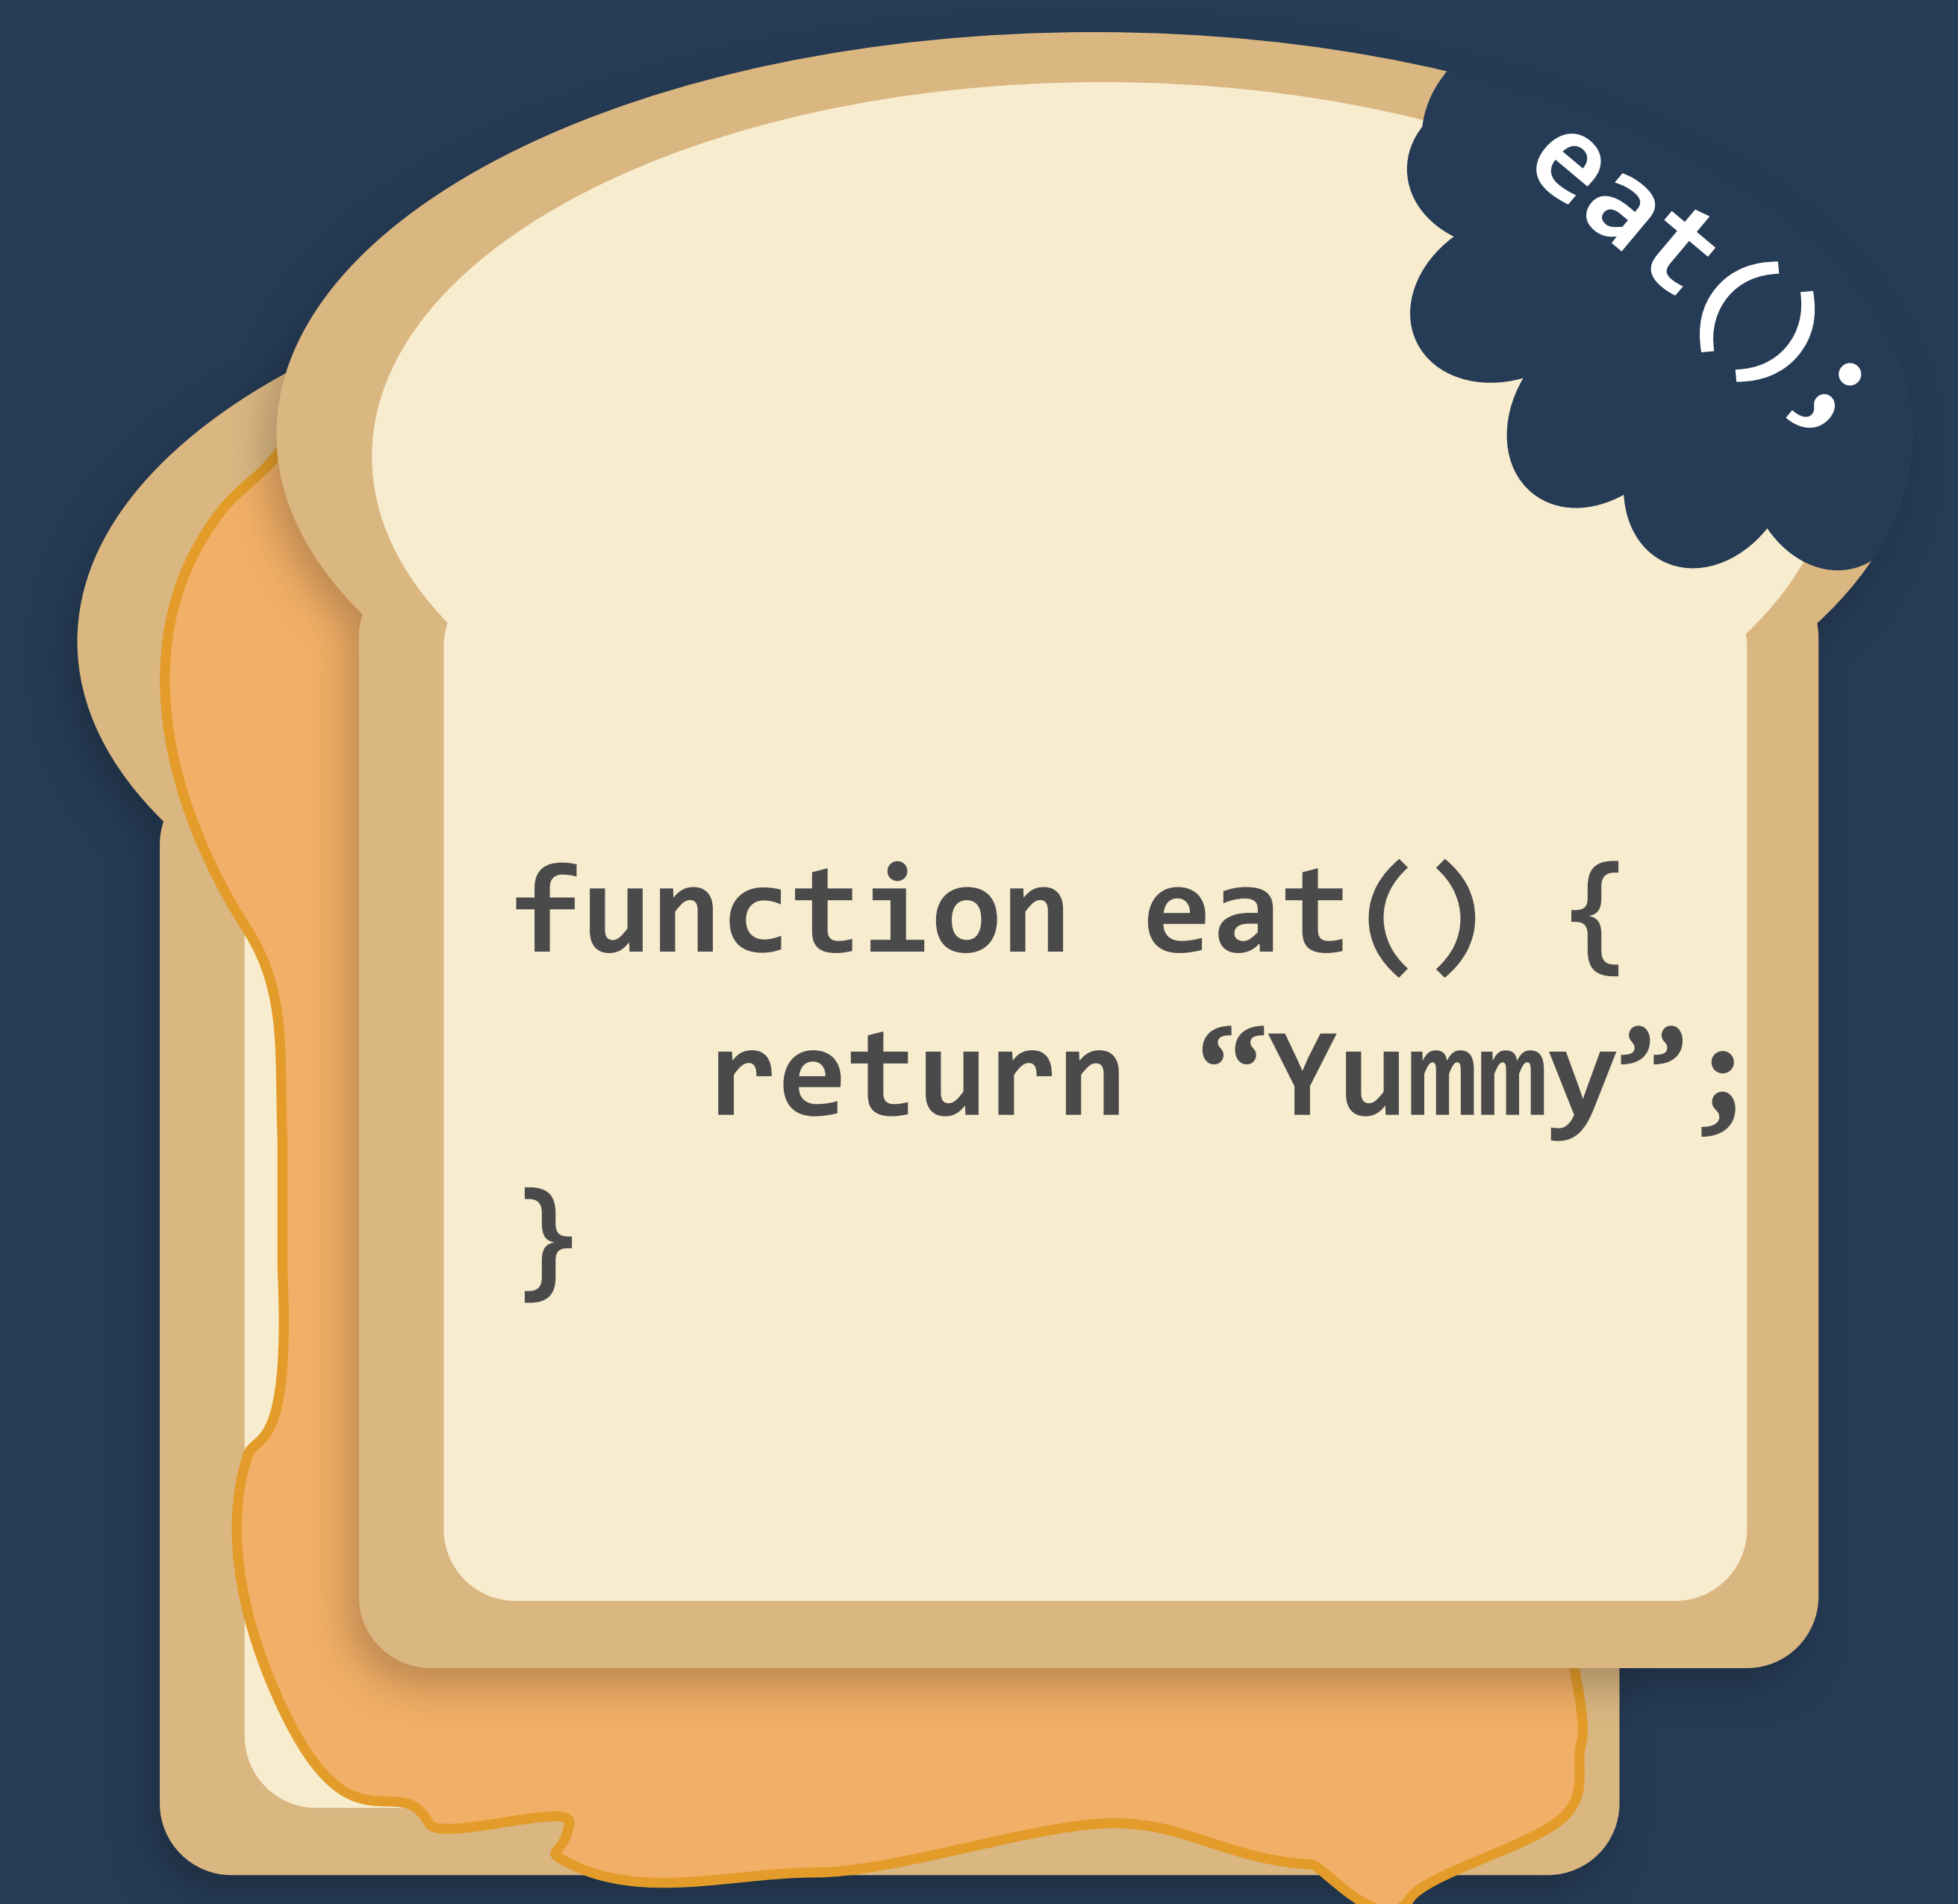

Hyper Text Markup Language (HTML for short) is the **bread** of the website. With HTML, users see text, charts, images, and etc that make up the site.

CSS{ }

Cascading Style Sheet (CSS for short) gives websites their **look**. It's the garnish that you put on the bread. With CSS, you can change the color, location, position, etc. of HTML.

JavaScript;

JavaScript (JS for short) provides the **behavior** for websites. With JS, we can define what happens when a user clicks, types, or interacts with the HTML.
